Jason,

We finished the takeoff on the project bidding next week and noticed some discrepancies/ ambiguities that I wanted to bring to your attention.

- The legend on the Kamm sheets says the section is 7" HMA over 8.5" AB. The cross section on sheet X1 shows 3" HMA over 8" AB.
- The legend on College Ave doesn't say anything, but the cross section on sheet X2 shows 4" HMA over 5" AB.
- The legend on the demo and layout sheets refer to sheet numbers that I can't find (i.e. AA2, AA5, L15-L19, etc.)
- The plans don't show any AC patching at the median curbs where the road is not getting reconstructed. Do we assume a 12" wide by 7" thick plug?
- The legends for College and El Monte don't specify the hatching, but I'm assuming it's a 3" overlay as shown on the Kamm sheets.
- The quantities in the legend on the Kamm sheets for reconstruct or overlay don't jive with anything that I can tell.
- There is no demo shown for the medians on the El Monte demo sheets.
- The demo on College says remove 15.5", but if the structural section for College is 11", why is 15.5" being removed?
- Some of the bid quantities appear to be incorrect (i.e. sawcut, curb & gutter, sidewalk). Depending on what the structural sections are for the AB and AC, those might be off.
